

# GRP Cleaning Guide & Tips

## Data Sheet

### CLEANING GUIDE AND TIPS

Whilst Dino Grip products are extremely resilient to dirt and contaminations it will, as with most other things, become dirty.

Dry dirt and debris can easily be removed using a stiff brush and should be carried out on a regular basis.

If the product has been subjected to spillages or the dirt has become embedded, detergents can be used. It is always advisable to test any cleaning product on the product before starting the cleaning procedure. This can be done in an inconspicuous area of the installation.

Using the detergent, warm water and a suitable brush; scrub the affected areas until clean. The excess water can be removed using a wet/dry vacuum cleaner or power washer.

Where circumstances allow, the product can be power washed without causing harm. Care should be taken when the product has been stuck down and / or edge sealed as very high pressure power washing or repeated power washing could cause damage to sealants and adhesives.

### GENERAL ROUTINE MAINTENANCE

The security of the fixings / adhesives should be checked on a regular basis. Circumstances will vary, based upon the volume of foot traffic etc. but, as a guide, monthly inspections would be advisable in high trafficked areas.
